Skills

- Languages: Zig, C, Go, Python, TypeScript, JavaScript (ES6+), Bash, SQL, HTML5, CSS3
- Frontend Frameworks: React, Next.js, Vue.js, Nuxt, Svelte
- UI/Styling: TailwindCSS, CSS3, Shadcn/ui, Kumo/ui
- Backend & APIs: Go (Gin), Node.js/Bun, Python (FastAPI), REST, Flask, GraphQL, WebRTC, Webhooks
- Databases: PostgreSQL, SQLite, Redis
- Systems Programming: Emulators (NES, Chip-8), process injection, memory management, algorithms
- Cybersecurity: Web exploitation, binary analysis (pwntools), reverse engineering (Android/Smali), malware development, network security (eBPF/XDP), CTF attack/defense
- DevOps & OS: Linux, Docker, Git, VPS management, shell scripting
- Mobile: Dart, Flutter

Experience

Grem Company Junior Web Engineer 06/2026 - 09/2026

- Developed a full-stack online banking platform, with an AdonisJS backend and a Nuxt frontend
- Designed and built the internal backoffice for operations and account management
- Implemented an Anti-Money Laundering (AML) prevention solution
- Integrated Strong Customer Authentication (SCA) with MFA/2FA, in line with PSD2 security requirements

Projects

CookieFarm Project Manager and Developer 03/2024 - Present
[Github](#)

An Attack/Defense CTF framework inspired by DestructiveFarm, developed with the ByteTheCookies team. Its hybrid Go + Python architecture automates the entire flag lifecycle: fetching the flag-ID JSON from the competition infrastructure at every tick, normalizing different flag-ID formats into per-team lists, dispatching targets to exploit threads, and submitting flags to the checker before TTL expiry. The "zero distraction" philosophy means players only write the exploit logic a Python client package with a decorator handles the rest. Includes Docker-based attacker environments for testing.

Armonia 04/2025 - To Present

A complete platform for the management of funeral home services, built to digitize daily operations: document compilation, resource management and process automation, including a cash-register

module with dashboard and statistics. Developed with Next.js (App Router) and TypeScript on the Bun runtime, with a domain-organized data layer built on MongoDB/Mongoose models and Zod validation schemas.

Styx
[Github](#)

08/2024

A Next-Generation Firewall (NGFW) providing protection at both host and application level, built in Go on eBPF/XDP for kernel-level, high-performance packet processing with a modular architecture.

Education

University of Salerno

Computer Science

09/2025 - To Present

ISS Margherita Hack Baronissi

IT · Second Grade

09/2020 - 07/2025
